- VirusTotal - A Powerful Malware Analysis Tool

- VirusTotal is a free online service that analyzes files and URLs for viruses, worms, trojans, and other types of malicious content. It aggregates results from multiple antivirus engines and website scanners, providing users with a comprehensive security assessment. By uploading a file or submitting a URL, users can quickly determine potential threats and share findings with the cybersecurity community. VirusTotal is widely used by researchers, analysts, and IT professionals to enhance digital security and prevent cyber threats.
